

Supplier management built for aerospace & manufacturing

Jitiuvi is a two-sided SRM platform. OEMs run their supplier base — scorecards, nonconformances, POs, certifications, risk. Suppliers respond in the same system. One record, both sides, full audit trail.

THE PROBLEM

Supplier quality still runs on spreadsheets, shared inboxes and PDF scorecards. Certificates expire unnoticed, NCR responses live in email threads, and on-time delivery is reconstructed by hand the week before an audit. There is no single system of record a quality manager can hand to an AS9100 auditor.

WHAT JITIUVI DOES

Supplier scorecards

Quality and on-time delivery scored automatically from live NCR and PO data, on a rolling 6-month window. 0–10 normalized scorecards, per-customer segmentation, exemption handling.

Purchase orders & quotes

RFQ → quote → PO in one thread. Overdue calculation, need-by dates, net order value, document attachments per line.

Supplier marketplace

Discover and connect with qualified suppliers by commodity, capability and lead time. Post requirements to a Supplier Needed board.

Risk & alerts

Automatic alerts below 70% performance, expiring certs, overdue POs and open disruptions — with acknowledgement history.

Nonconformances & SCARs

Raise an NCR, route it to the supplier, track RCCA response against SLA, close it out. Both sides see the same record and the same clock.

Certification compliance

AS9100 / ISO 9001 / NADCAP tracking with expiry alerts. Suppliers upload their own certs; every connected customer updates automatically.

ERP / PLM integration

EDI 850/856/810, webhook connectors, field mapping, retry and dead-letter queues, connector health monitoring.

Compliance audit trail

Field-level change logging with user, timestamp and before/after values. Exportable to CSV for auditors.

WHY IT MATTERS (typical annual cost of doing nothing)

Where it hurts	What it costs today	With Jitiuvi
Manual scorecard prep	4–8 hrs per supplier per quarter of analyst time	Generated continuously from live data
Late/expired certifications	Line stoppages and audit findings at surveillance audits	Automated expiry alerts 90/60/30 days out
NCR response chasing	Email threads with no SLA clock; average closure measured in weeks	Tracked SLA per record, escalation built in
Audit evidence assembly	Days of screenshotting and exporting before every audit	One CSV export, field-level trail

Who it's for

Supplier Quality Managers, VP Operations and procurement leaders at aerospace, defense and precision manufacturing firms managing 20–500 suppliers.

Commercial model

Per-supplier subscription — you pay for the suppliers you manage, not per seat. Unlimited internal users. Suppliers are never charged.

Deployment

Cloud-hosted, no install. Typical workspace live in a day: import your supplier list, invite suppliers by email, scoring begins immediately.

Security posture

TLS 1.2+ in transit, AES-256 at rest, row-level tenant isolation, MFA for admin accounts, SOC 2 Type 1 readiness program in progress.
